On/Off Power Switch with Status Light

PRODUCT ID: 3723

HURRY, FRANK, THERE'S TOO MUCH POWER! We'll have to cut the circuit before this reactor goes up in smoke!"

This simple but effective product is a solution to all your accidental-tourist-stuck-in-a-nuclear-power-plant-that-just-happens-to-be-right-above-a-now-active-volcano problems! Or just something without an off-switch.

Say you have a nice, elaborate setup for your NeoPixel or DotStar LED strips but no easy way to turn them off? Or maybe an IoT device that you're *not quite positive* really turns off when you press the button.

Save energy, avoid accidental data transmission, and prevent the *spectre* of vampire power (ooh, spooky) with this On/Off Switch with Status Light! Works with any standard AC outlet and is perfect for any devices without a dedicated power on/off.
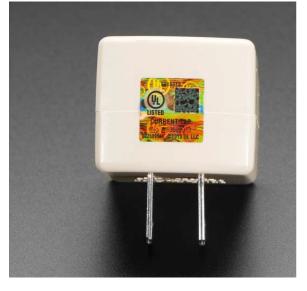

TECHNICAL DETAILS

Rating: 125 VAC / 15 Amp 1875W

Note: This isn't a surge protector and is only for indoor use.
